How the Higgs's boson (i.e. fractalon) turns into a lepton, like a "Swiss Watch Tourbillon" All the energy of the universe is stored in a network of rotating Higgs bosons in a nearly cubic structure, "right" because each one has its own space, no one touches it and each spin undisturbed. This rotation represents the speed of light.

When you put one more here and there, it will be 8+1 odd neighbors, 4 rotating in one direction and 4 in opposite direction, now one it will deform the network, it will start to spin, like a tourbillon of a Swiss watch, it slows everyone down, it is no longer Higgs boson, it is now "left" lepton, it steals rotational energy and transform it into translational energy (precessions and translations).

Two disturbances appear because of this: GRAVITY and ELECTROMAGNETISM.

When 6+1 left "communists" leptons are slowed down enough they get stuck in a PROTON ($7=2+2+3=u+u+d$)

They do not spin individually anymore, they just warp the clock and try to jam it, they turn more Higgs bosons around into electrons and slow down the rotation of all even more.

The whole Universe I like a giant SPACE-TIME clock.

I.R: Dr Terec, can you explain to us in a few simple words this theory and how it differs from other theories, such as string theory?

Dr Terec:

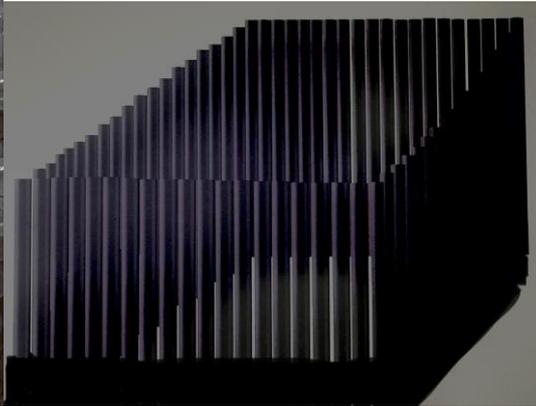

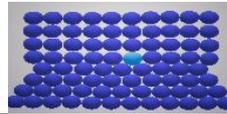

*Of course, first of all, it is the only theory that followed Einstein's vision that defined gravity as a deformation of SPACE-TIME. I have taken this concept further and present you with an extremely logical explanation of Gravity, but also of the other three fundamental interactions (electromagnetism, weak force and strong force) as well as perturbations of SPACE-TIME. The entire universe is a kind of fluid clock in constant change with only two parameters: **The New Cosmological Constant** to define the deformation and **The Time** to define the number of iterations that will define its shape at each moment.*

*Secondly, it is the simplest theory through which any person on Earth without higher education in Physics can understand the Theory of Relativity, can understand how the Higgs's boson (i.e. **fractalon**) creates **Gravity** and **Electromagnetism**, **leptons** and **electrons**, **protons** and **atoms** and why the **speed of light** can never be exceeded.*

I.R: If it's so simple to understand then why haven't I understood anything until now, can you help me?

Dr. Terec

(Laughs ironically) Of course, now please use your imagination for 3 minutes. Try to imagine somewhere in space, like ISS, a completely empty swimming pool and start filling it with balls like in the picture below and throw as many balls as possible into it, until there are enough to form a perfectly cubic network. Regardless of which direction you threw them in and how hard they were spinning at the beginning, all the balls will self-arrange in a perfectly cubic network, in columns of balls that will spin half in one direction and half in the other.

1. First phase

2. Peripheric Motors columns for rotating the balls in the pool (every column rotate in opposite direction)

3. Self-arrangement in a cubic structure when they start to spin

And now comes the culminating moment of the whole theory. The next 2 balls that we will introduce will explain 3/4 of the entire universe. When in this pool * of 20/20/20 balls that spin barely touching each other and we call them Higgs Bosons or Fractalons, we will introduce a **single new** additional ball, this new ball will move differently and will force the others to rotate differently as I explain in the Fractalon short videos on **youtube** and in the 3rd part in my book *Fractalon: The Forces*.

**(which I reproduced, in the middle picture shows some of the columns used to start Higgs bosons rotating half in one direction and half in the other, right picture self-arrangement of the balls)*

Two disturbances will appear in the pool, the first one is a concentric decrease in the rotation speeds towards the additional ball due to the loss of equatorial contact and the appearance of sinusoidal contacts that will generate precession, and the second phenomenon is the appearance of two areas with different rotation and translation around the additional ball which will receive a double 8 rotation, half-spin, 720 degrees, and we can already call it a lepton. As we get to introduce other additional balls (leptons) into the pool the rotation speed will decrease more and more, more translations will appear, more precessions, that will deform the cubic structure.

When the deformation is strong enough and the rotation speed is low enough, the additional balls will change places with "Higgs bosons" still organized in the cubic structure, they will steal a little of each one's rotational energy and will move towards the center of the pool due to the different rotational speed of the 8 neighbors

We know this phenomenon as Gravity. The impact between the areas with different rotation and translation will cause some of the precessions with cyclic frequency given by upside-down rotation of the leptons to propagate in the network, what we now call **THE LIGHT**.

Both **Light** and **Gravity** are precessions transmitted from one ball to another. The transmission speed will depend in the speed of production of a precession, which is determined by the rotation speed of each "Higgs boson" in the system. For this reason, the **Speed of light** and **Gravity** are the same and represent the rotation speed of each ball (fractalon=Higgs boson). To change their position between them, multiple successive rotations are needed, so the translation will never be done at a speed higher than rotation, it being produced through rotations.

We will obtain a cloud of leptons, of electrons. The space in which each lepton can rotate in double 8 between the 8 neighbors, this prison we can already call the weak force, that is, it represents a freedom of movement, a freedom of coupling. As we introduce more balls, eventually some balls will lock together and will no longer rotate individually. The first seed of matter appears like a snow flake in the plane in the middle of the pool.

7 balls are stuck together, stop rotating individually. This is the Proton.

a. one Lepton, deformation of the Network, Gravity and E-M without matter

b. 2 leptons, Gravity and Electromagnetism, they change places between them, in the end the 2 additional balls are visualized in the middle.

c. 1 PROTON 7 balls no longer spin individually, they just oscillated together

Zoom of the PROTON, Black dots are blocked balls, the red ones with increased translation, the green ones with high rotations, frequency of light. Red and green dot balls are Electrons (the 2 poles x/y spin. The ways in which they change positions between them are orbitals.

I.R. So Einstein's famous equation $E=mc^2$ remains valid

Dr Terec

You see, all the initial energy is rotational energy, when 7 fractalons are locked in a Proton, they have a "remains" energy of oscillations(group precession) and a translation energy if the Proton is in movement, but majority of energy is lost in light, precessions transmitted in the network with the frequency of the every electron precession.

So, Einstein's equation remain valid with the specification that how many Higgs's bosons-Fractalons will be locked in matter, so much rotational energy can be recovered, so in equation $E=mc^2$, "m" represents the number of Higgs bosons that no longer spin individually, like those in a vacuum and "c" the initial rotation of everyone.

Per unit volume in a chemical or nuclear reaction, in order to release energy, the density of fractalons per unit of volume(electrons and complexes protons-neutrons=atoms), this density is the **Cosmological Constant**, must increase, and vice-versa to retransform an Iron atom into Hydrogens atoms and then into vacuum, this amount of energy must be delivered to it. **It is easier to produce energy and matter than to produce a vacuum from matter.**

I.R Do you think the scientific community will validate the theory? You can validate it some way?

Dr Terec : The physicist community had a harder time at first, but the chemists will do it right away. Let me explain.

I called this pool of atoms formation **FRACTALPOOLMETER** and I filed a patent in France for the simulator, with the addition of new and new balls, the entire Mendeleev table was self-created as by magic, as in the crystallization of **SNOW-FLAKES**, without any errors, in the order of the series an periods according to an exact formula :

$$2s+2s+6p+2s+6p+2s+8d+2s'+6p+2s+8d+2s'+6p+2s+14f+8d+2d'+6p+2s+14f+8d+2s'+6p+2s+20t+14f+8d+2s'+6p+2s+6p+20t+14f+8d+2s'+6p=222 \text{ TRAIANUM NOBLE GAS ATOM.}$$

Why this exact formula? you see in the pool and in the photo of my book (in the picture below). Mendeleev become my new best friend; I love him! He is my savior, he is my code, and my validation of the theory.

Rule of self-arrangement of Higgs's bosons in atoms

A formula not discovered by the entire community of physicists and chemists because they did not realize that in the 10 "d" electrons 2 will become "s" surrounded by 8 "d" as all the reactions and properties of chemists have predicted. I have made you some reproductions of the atoms that appear. In the 3 images: on the left you have a proton, as we have already seen, the Hydrogen atom, in the center you have 4 planes of protons that regroup in a "reaction" into a Helium atom, and on the right you have the Gold atom. It is beautiful, isn't it?

Proton

Hélium Atom

Gold Atom

I.R. :How can the new theory change the world?

*Dr Terec : There is a latent energy between SOLID-LIQUID-GAS-VACUUM and vice-versa. Matter no longer has any rotation energy except for the electrons and Higgs bosons that will be immobilized in new atoms (in current physics they define this concept by **POTENTIAL** -just a nonsense word for physics). as the new theory creates the possibility of extracting latent heat between vacuum and matter (for example **sonoluminescence** already exploits this reaction of compressing the void in the matter). The major risk is that another country will understand the "**potential**" of the new theory and exploit this new technology before us.*

I.R.: Thank You and good luck Mr. Terec.

Dr Terec : Me, the STALKER ,thank you for welcoming me to the zone.
